TO: Minerals File

FROM: Tony Gallegos, Reclamation Engineer *aa*

RE: Site Inspection, R & S Enterprises, R & S Processing Facility, S/019/042, Grand County, Utah

Date of Inspection: May 6, 1997  
Time of Inspection: 1210 - 1245  
Conditions: Partly cloudy, windy, warm  
Participants: Robert Thomas, Contractor for R & S; Will Stokes, SITLA; Tony Gallegos, DOGM

Purpose of Inspection: To examine the proposed site of the processing area.

In the company of Mr. Robert Thomas, we examined the processing plant site. There are a number of existing structures and facilities present at this site. These features include: a long mobile home type trailer, a large metal barn type building, an excavation for a pond system, a large tank on a trailer, an assortment of trommel or separating systems, a large rotating ball mill, and an old crusher with a hopper and grizzly screen system. There were several vehicles on site.

Mr. Thomas gave us a general explanation of the work he was performing on site. He is trying to get things in working order for the processing plant. The plant is currently being run by power generated on site. One of the issues Mr. Thomas is working on is to get a right-of-way access to the power lines nearby, although the status of that right-of-way is unknown at this time. Mr. Thomas explained the general components of the leaching system and how they would work. Photographs were taken of the equipment and the overall processing area.

A copy of this memo will be forwarded to Mr. Landry, who is listed as the operator for the mine site S/019/040 to be supplying ore to this processing facility.
